

About the Course

Currently Gynecologic Laparoscopy is not only a diagnostic procedure but also a minimally invasive surgery. Their indications have increased progressively, to include myomectomy, hysterectomy, lymphadenectomy and other more complicated and challenging operations. The Division of Endoscopic Gynecologic Surgery and The Thai-German Multidisciplinary Endoscopic Training Center under the Royal Patronage of HRH Maha Chakri Sirindhorn, Department of Obstetrics & Gynecology, Faculty of Medicine, Siriraj Hospital, Mahidol University have realized that operative Endoscopy is turning to be a dominant surgical technique in the 21st century. This surgery needs a well-trained medical personnel team and appropriate surgical instrumentation. It is the responsibility for the medical school as Siriraj Hospital, which has great potential in this arena to train the gynecologists as the beginner in this key-hole surgery. In consistency with the situation of the gynecologists and nurses in Thai hospitals, particularly the provincial hospital, which lack of medical personnel. We set up the quaternary 5 day-short-courses training on basic laparoscopic surgery, to train the gynecologist or nurses who need to improve their ability and knowledge in Gynecologic Endoscopy. This training course includes didactic lectures, pelvic trainer and animal hands-on model. We ensure that this training course is the most helpful for the beginners in laparoscopy. We wholeheartedly welcome not only the Thai gynecologists and nurses, but also the oversea participants to attend this training course.

Amphan Chalermchockcharoenkit

Amphan Chalermchockcharoenkit

Chief of The Division of Gynecologic Endoscopy
Director of Thai-German Multidisciplinary Endoscopic Training Center,
under the Royal Patronage of HRH Maha Chakri Sirindhorn.
